

ChurnGuard — Business Analysis Portfolio Case Study

Analyst: Shubham Tiwari — Senior Business Analyst
Domain: B2B SaaS for e-commerce sellers · CRM implementation · marketplace integrations
Platform context: Zoho CRM Plus, Zoho Analytics, Zoho Desk, n8n, Deluge, SQL, Power BI
Document set version: 1.0 · Release R1

Why this case study

Threecolts sells software to e-commerce sellers who trade across Amazon, Walmart, eBay, Etsy, Shopify and TikTok Shop. Retention in that customer base is unusual: a seller can churn because the *software* disappointed them, or because their *marketplace business* declined — a suspended Amazon account, a collapsed sales season, a store migration. Customer Success saw the outcome (a cancellation) long after the cause.

ChurnGuard is a churn-risk detection and retention workflow built inside the CRM. It scores every high-value account daily against five weighted signals, tiers the risk, routes an SLA-bound task to the owning CSM with the reason for the score, and tracks the intervention through to a recorded outcome.

This pack contains the complete requirements artifact set I produce on an engagement, from business case through to UAT sign-off.

Document index

#	Artifact	File	Purpose
1	Business Requirements Document	01_BRD_ChurnGuard.md	Problem, objectives, scope, business requirements (BR-xx), benefits case
2	Functional Requirements Document	02_FRD_ChurnGuard.md	What the system must do (FR-xxx), mapped to each BR
3	Software Requirements Specification	03_SRS_ChurnGuard.md	System context, interfaces, data model, non-functional requirements (NFR-xxx)
4	Functional Specification Document	04_FSD_ChurnGuard.md	Build-level detail: scoring algorithm, field specs, screen behaviour, validation, error handling
5	Requirements Traceability Matrix	05_RTM_ChurnGuard.xlsx	BR → FR → FSD → user story → test case → UAT → sign-off
6	User Stories & Acceptance Criteria	06_User_Stories_and_Acceptance_Criteria.md	Sprint-ready backlog in Given/When/Then form
7a	AS-IS Process Map	07_AS_IS_Process_Map.mermaid	Current reactive retention process with pain points
7b	TO-BE Process Map	08_TO_BE_Process_Map.mermaid	Redesigned process with automated detection and SLA routing
8	Wireframes	09_Wireframes_ChurnGuard.html	Annotated mid-fidelity screens, each callout tied to an FR ID
9	Data-Flow Diagrams	10_DFD_Level_0_Context.mermaid , 11_DFD_Level_1.mermaid	Context diagram and Level-1 decomposition
10	UAT Plan & Sign-off Pack	12_UAT_Plan_and_Signoff_Pack.md	Entry/exit criteria, scenarios, defect protocol, sign-off sheet, hypercare

Reading order for an interviewer: 01 → 07/08 (the process story) → 02 → 06 → 05 (the traceability proof) → 12.

Traceability at a glance

BR-04 Alert the owning CSM when an account crosses into a higher risk tier
└ FR-021 ... FR-026, FR-028, FR-029
└ FSD §4.4 (task fields, SLA clock), §5.2 (task screen)
└ US-08, US-09, US-10
└ TC-015 ... TC-022
└ UAT-05 → signed off by CSM + CS Manager + sponsor

The same chain exists for all 12 business requirements. 05_RTM_ChurnGuard.xlsx holds it in full, with a coverage summary that flags any requirement without a test.

Note on figures

This is a portfolio sample. Account volumes, ARR values, thresholds and baseline metrics are **illustrative and anonymised** — the structure, method and level of detail

are the deliverable, not the numbers. Targets are stated as targets, not as claimed outcomes.
